2023 Survey Coments
Take the video/photo results and create a production with chapters and music that can be burned to a CD/DVD using multimedia software.
I was out of town when you had the meetings about drones and 3-D printing, I would be interested if they are repeated.
Would like to hire an expert to help me solve computer problems
Seems to be a bias towards Apple products in terms of club offerings/support by monitors. Many of us have Android phones and Windows operating systems. Was told 'Most members have Apple products', would like to know the results of this survey if that statement holds true.
Yahoo Mail
Classes for beginners on Apple products (iPhone14...Apple watch)...Class on ROKUClasses on other streaming options
I'd be willing to help with training on some of the above topics but I don't have the time to create a lesson plan for them. I could be a co-trainer.
Need to convert VHS tape to thumb drive.
The board should consider paying an Instructor to teach a class when there is no one available within our community with the subject matter.
I'd like help organizing photos.
Willing to teach class in Numbers this summer. Currently in process of converting some Excel spreadsheets to Numbers and creating new spreadsheets in Numbers with pivot tables, etc. I should be up to speed by July or so.
I am proficient in InDesign, Photoshop, Acrobat, as well as Word, Excel and Powerpoint, although I would not call myself an expert. I know there is always more that I can learn. I would like to attend any sessions you might offer in the topics I am interested in. If there is a need, I would consider teaching in the future after we get settled into our new home at SBR.
What I was hoping to find in this club was more information delivered via classes/presentations. The mentoring is great but I find I don't always know what I need more in-depth information about until I've received the basics.
I would appreciate learning how to best organize photos already stored in various types of mediums; photos, negatives, CDs, etc. I would also like to learn how to decide if old laptops are worth keeping and updating, how to wipe them for disposal, and where to dispose of them. I would also like to learn how to best integrate Alexa on various TVs, cell phones, etc. Thank you!

The topics I responded definitely to are of interest in varying degrees. I'm a photographer so know a lot about the Photo topics, but interested in learning more, but typically take professional workshops. I'm mostly interested in learning more about home entertainment set ups and operations.
Club needs to offer help to residents not knowledgeable on smart phone, tablets computers. How to search, register on medical websites and more
I tried to print this survey but the check marks (that is the green dots) didn't print. However, the red dots did.
Thanks for asking.
Occasionally meet together to have discussions
All the things I checked in 'definitely' interested in learning, simply means I could use more ability in those items, and not necessarily that I would be going for formal lessons. AT THE MOMENT I NEED A LOT OF HELP WITH MY EMAIL ON MAC. It seems really screwed up. I am also ready to start up a Mac M1 Mini, and have concerns about fixing email, getting rid of Microsoft office subscription and files and replacing it by buying Microsoft Word for Mac installed, and getting my 2nd monitor to stop going dark for a brief second on a random basis. Seems all my real needs don't fit in the categories listed.
